SUMMARY

Self-taught engineer turned VP of Product at JPMorgan — no CS degree, built through DevOps, SWE, and platform PM at enterprise scale. Hands-on in agentic systems — solo-building an iOS app: TypeScript MCP server coordinating the Claude Agent SDK & cursor-agent CLI, stateless multi-agent orchestration through automatically contained context files, structured agent handoff protocols for cross-session continuity.

SKILLS

Product: Product Roadmapping · API-First Design · Stakeholder Management · Agile/Scrum · MVP Definition
Technical & AI: REST APIs · Microservices · ISO 20022 · Swift/SwiftUI · React/TypeScript · Python · AWS · LLM Product Development · Agentic Systems · AI Workflow Automation · Cursor · MCP · Claude API · AI-Native Development

EXPERIENCE

JPMorgan Chase · Chicago, IL · Oct 2022 – Present

Vice President, Product Management · Sep 2025 – Present

Sr. Product Associate → *Product Associate* · Jul 2023 – Sep 2025

- Own the roadmap for an API-centric platform functioning as both the system of record for onboarding request lifecycles and the reference data service — consolidating data from multiple SORs into a single integration layer consumed by 10+ internal applications, reducing complex product setup time from ~4 hours to under 1 hour
- Owned the full eBAM lifecycle: maintained the legacy service, conducted deep capability analysis, authored the technical roadmap to modernize the platform, and led implementation following the ISO 20022 ACMT message set — transitioning treasury services from manual PDF-based workflows to bank-agnostic, automated request intake and processing
- Serve as the bridge across operations, compliance, and technology teams — translating workflow requirements into product scope and engineering priorities, and surfacing platform constraints back to stakeholders across organizational lines
- Established Scrum from scratch on a 6-person engineering team at JPMorgan — built ceremonies, sprint cadence, and backlog discipline that sustained concurrent delivery across two live workstreams (API platform evolution and eBAM modernization) with no prior process foundation

Associate Software Engineer · Oct 2022 – Jun 2023

- Extended and maintained a micro-frontend React TypeScript component library; migrated test coverage from 30% to 90% by transitioning from Enzyme to React Testing Library
- Built frontend for core onboarding platform, establishing technical fluency in the product later owned as PM

Bootcampr · Remote · Jan 2022 – Oct 2025

Founder & Product Lead · Jan 2022 – Oct 2025

- Founded a platform to close the employment gap for bootcamp graduates — a problem lived through personally — and guided cross-functional teams of engineers, designers, and PMs, several of whom landed their first industry roles through the project
- Navigated company through Antler VC accelerator cohort; led multiple product iterations and strategic pivots across three years before closing in October 2025
- Managed full product lifecycle end-to-end: vision, roadmapping, sprint planning, stakeholder alignment, and direct engineering contributions across a full-stack web application

MarketAxess · New York, NY · Mar 2022 – Oct 2022

DevOps Engineer · Mar 2022 – Oct 2022

- Led initiative to build self-service job automation infrastructure using Rundeck and Terraform, eliminating hours of manual DevOps work weekly and enabling developer teams to self-service previously manual requests
- Developed a Python/Jenkins pipeline automating snapshot archival to AWS S3, triggering cleanup at 80% server capacity

General Assembly · New York, NY · Sep 2021 – Mar 2022

Instructional Associate · Sep 2021 – Mar 2022

- Supported software engineering cohorts of 20–30 students through instruction, code reviews, and CS lectures covering full-stack development, algorithms, and data structures

PROJECTS

OneLook · 2026 – Present ·

Native iOS Productivity App (In Active Development · Feedback pipeline live) · Solo Build · Swift/SwiftUI

- Building a unified calendar, task, and habit management app in a single daily view — inspired by personal frustration with productivity tool friction and a genuine interest in what agentic systems make possible
- Designed and built a multi-agent development system: a TypeScript MCP server (pm2) dispatching to Claude Agent SDK for backend/Supabase work and cursor-agent CLI for Swift/SwiftUI; structured task contracts (AGENT_HANDOFF.md) coordinate stateless agents through a shared filesystem protocol with zero manual prompt routing; Claude API-powered feedback classification pipeline running in production
- Spec-as-source-code discipline: specification errors treated as build errors with no natural catch point when AI is the primary builder

EDUCATION & CERTIFICATIONS

General Assembly — Software Engineering Immersive (2021) · Product Management Certificate (2023)
